

Schools Competition

Motor Controller Order Form

Evolocity has worked with Dynamic Controls to design a motor controller to suit the 350W, 24V standard electric bike kit supplied to schools for the EVolocity competition.

In both Regional and National competitions there is a category that recognises the performance of teams that have built and programmed their own controller. Support for this will be provided from Build Day 2.

The kit is supplied at cost through Electroflash Resourcing Ltd. Freight will also be at cost via surface freight to the school office.
